

Figure S1: Mean percentage of apospory found in ovules of *Ranunculus* F_2 hybrids. The percentage of apospory varies between 7 and 25 % in *Ranunculus* F_2 hybrid ovules. Striped box plots correspond to F_2 crosses that descend from parents, which both have shown apospory before. Hybrid crosses depicted as white box plots have only an aposporous mother or father plant. N – Numbers are listed in Table 3. Outliers are marked as stars and open circles and in the boxplots the median is displayed.
